Two pathways to intervention-induced dormancy
task output → attributed effect
self-induced
coupled
measured component c, layer ℓ
δ
h′
h
natural activation geometry
nonlinear boundary
writes δ to stream
curv.
ripple
ripple
curvature propagates
downstream / interacting components (layers > ℓ)
δd
h′d
hd
boundary
residual stream
instrument families
divergence (δ): displacement off natural geometry
curvature: crossing / propagation of nonlinear boundary
interaction: coupling via residual stream
gate crossing
